

DAILY SCREENING QUESTIONS

- 1) Has your child (or you if a staff member) experienced any symptoms of COVID-19, including a fever $>100^{\circ}\text{F}$, a new cough, new loss of taste or smell or shortness of breath that started in the past 10 days?
 - 2) In the past 10 days, have you gotten a lab-confirmed positive result from a COVID-19 diagnostic test (not a blood test) that was your first positive result OR was AFTER 90 days from your previous diagnosis date?¹ Please note that 10 days is measured from the day you were tested, not from the day when you got the test result.
 - 3) In the past 10 days, have you returned from an international destination?
 - 4) IF a or b apply, you do not have to answer question 5.
 - a. Are you considered fully vaccinated against COVID-19 by CDC guidelines,
 - OR
 - b. Were you recently (within the past three months) diagnosed with COVID-19 and finished isolation in the past 90 days?¹
- *Please note that to be considered fully vaccinated by CDC guidelines, two weeks must have passed since you received the second dose in a two-dose series or two weeks must have passed since you received a single-dose vaccine.
- 5) To the best of your knowledge, in the past 10 days, have you been in close contact (within 6 feet for at least 10 minutes over a 24-hour period) with anyone who tested positive for COVID-19 for their first time or who has been told they have symptoms of COVID-19? Clinical staff who were in appropriate PPE are not considered close contacts in these scenarios.

¹ The 90-day count should start from your symptom onset date or, if you had no symptoms, the 90 days should start from your positive test date.
